

# HOW TO QUICKLY AND EASILY INSTALL A TOYOTA DUO PLUS ISOFIX CHILD SEAT

ALWAYS A  
**BETTER WAY**

ISOFIX is an international standard for fitting a child seat safely and simply, by rigidly attaching the seat to mounting points within your car, which eliminates fitting problems common with seat belts. **WEIGHT FROM - 9KG - 18KG. AGE - 8 MONTHS TO 4 YEARS.**

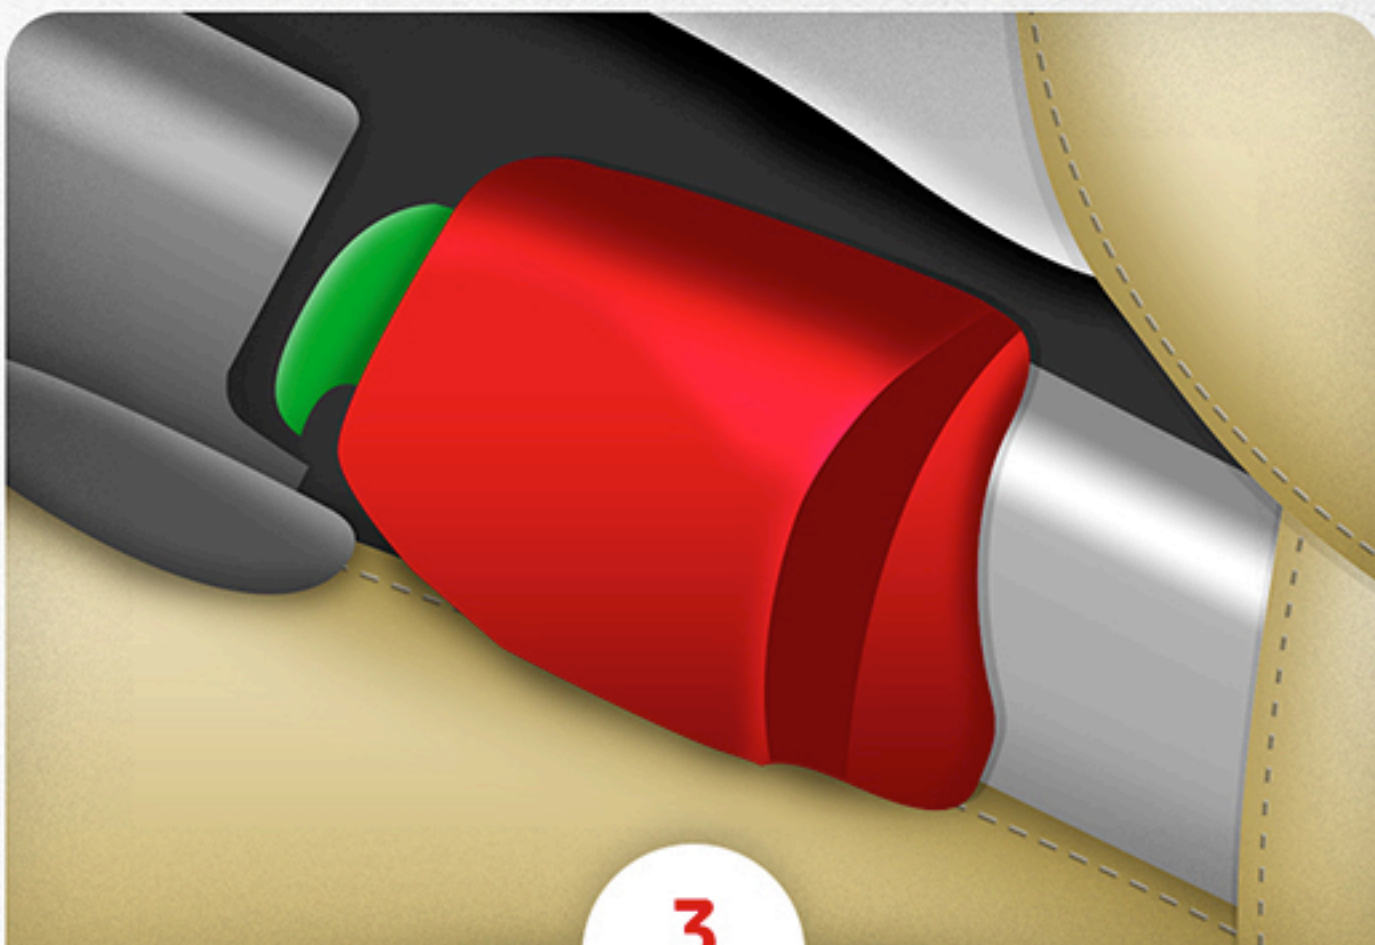

1

Pull the green handle out at the rear of the child seat to extend the ISOFIX connectors from the base.

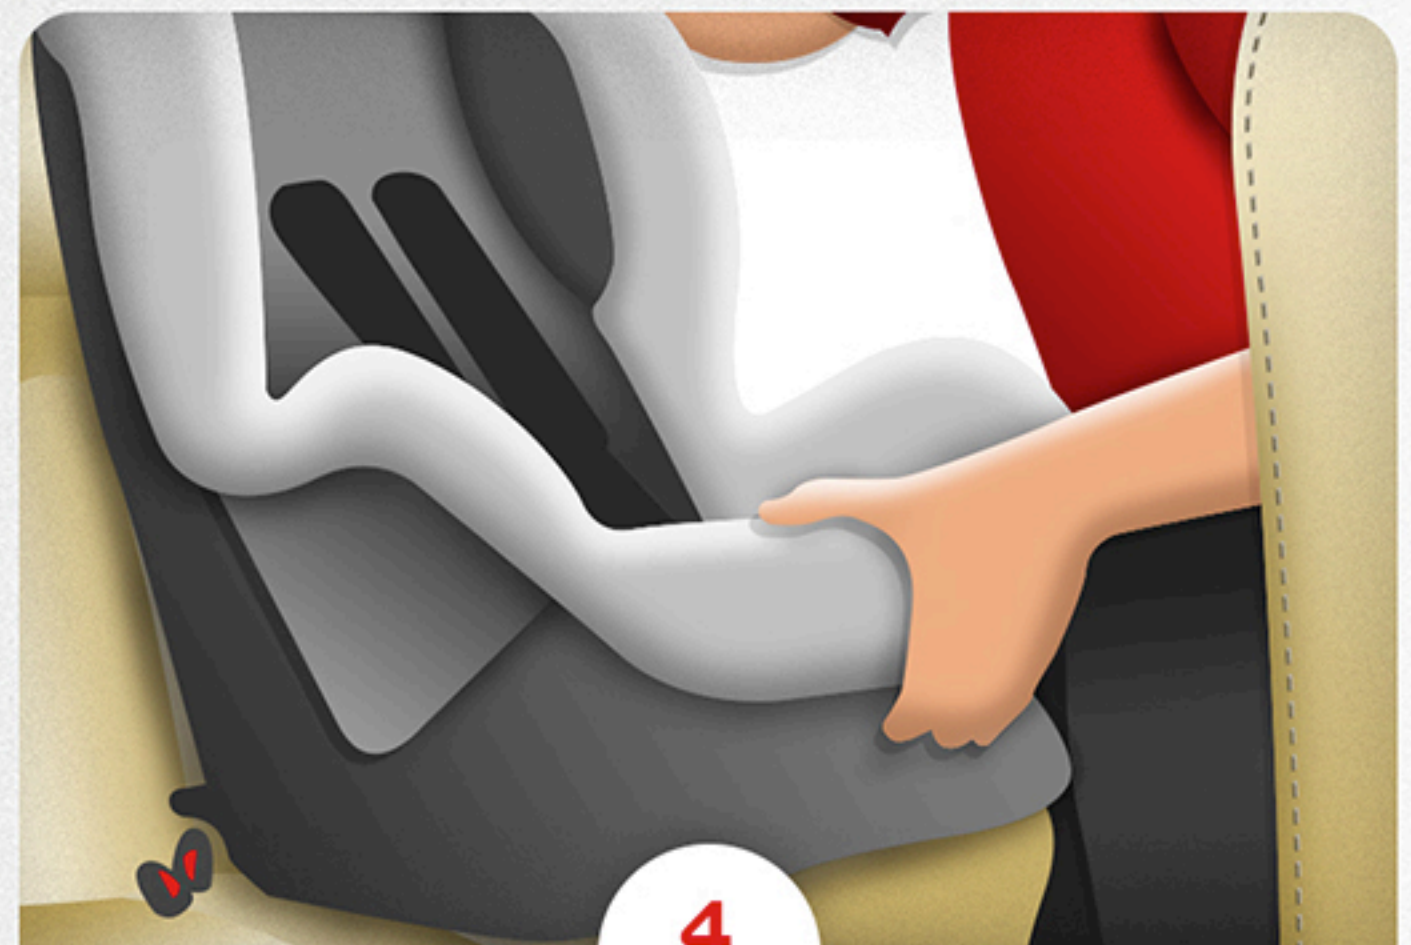

2

Line up these connectors with the mountings within the car.

3

Push connectors in to mountings until you hear a click and the green indicators show.

4

Push the child seat firmly in to the mountings and check that it is fully secured and doesn't move.

Once fitted please ensure your child is safely secured in the seat. Place your child's back against the chair making sure the shoulder straps are just below shoulder height, place their arms through the straps and connect to the central buckle. Pull shoulder straps tight making sure that you can still fit two fingers behind the strap.
